

Transcription Unlimited, Inc.

Your Single Source for Medical Documentation Solutions

Transcription Unlimited, Inc. (TUI) improves the workflow and reduces costs for hospitals and physician practices to create, store and share clinical documentation in an electronic format. How do we do it—by combining the benefits of **traditional dictation and transcription services** with the advantages of electronic medical records. Our documentation solutions assist clients in meeting Medicare incentives and much more. And, we do it all with solutions that are **customized to meet our clients specific workflows**.

Our Services:

■ High Quality Transcription and Editing

TUI provides its clients with complete, high quality, end-to-end transcription services or we can fill in the gaps for vacations or when your work load is just too large for your staff to handle. No assignment is too large or too small. Our transcriptionists are not just typists. They are medical language specialists, trained to produce patient notes that are timely, accurate, and legible. Our MTs rely on their thorough knowledge of anatomy, pharmacology and physiology to edit documents as they type. They listen for dictation errors such as invalid lab values or left/right discrepancies, and flag errors for correction before they become a permanent part of the patient record. Through this process, we produce documents that are extremely accurate and reflect the professionalism of your practice. We offer a variety of dictation options to meet your specific needs:

Digital voice recorder

Headset with personal computer

Toll-free phone

Speech recognition

■ Document Management

TUI's web-based platform sets the industry standard for creating, storing and sharing clinical documentation from any internet-enabled device. We've worked with multiple hospitals and medical practices to create workflows specific to their needs. And, we can design a solution to meet your unique needs that will allow you to dictate by telephone, handheld digital voice recorder (DVR), headset and PC, or front-end speech recognition.

We will transcribe or edit your notes with 98%+ accuracy and tag narrative notes for coding, PQRI reporting and EMR integration. You can then approve your documentation online using options such as e-Signature and batch approval.

Your documents will then be delivered and routed automatically to any locations/offices, fax machines, even printer trays that you choose. We can also import narrative notes and discrete data directly into your EMR.

You have complete, secure access to your documents from any PC or smart phone with internet access, and you can view summary patient charts with our exclusive Patient Viewer. All access to documents is tracked in complete compliance with all HIPAA regulations.

■ Speech Recognition

TUI's front-end speech recognition services allow clients to learn this skill over time without a large upfront investment in software. Our speech recognition technology increases your productivity by allowing you to create and edit patient notes in real-time. We also provide templates and macros to speed your dictation process.

■ EMR Optimization

For medical practices that have already invested in a legacy EMR, **TUI offers EMR services that re-introduce dictation into the physician workflow.** Eliminating productivity declines and utility deficiencies, TUI's EMR Optimization revitalizes legacy EMRs, allowing practices to get the most out of their capital investment. We've built HL7 interfaces into the industry's top EMRs, so you can continue to dictate patient notes and still receive all the benefits of EMR technology.

THE TUI PLATFORM

The TUI Platform is the nucleus of our technology, and the foundation of our medical documentation workflow. Our platform handles the transcription, transport, workflow, delivery and archival of your medical records. Think of it as a central hub that coordinates the flow of medical documentation in an environment that ensures the security and privacy of patient health information. The TUI platform is easy to learn, intuitive, and provides robust medical documentation solutions that can be scaled to meet the needs of any size hospital or physician practice.

Transcription Unlimited was founded in 1994 by experienced medical documentation and transcriptionist professionals. The mission of our company has always been to provide the highest quality service possible by harnessing the very latest technology to improve the medical documentation process. Located in Independence, MO, a suburb of Kansas City, we support clients nationwide and our company continues to grow at a rapid pace.
